

Multimice® *New*

Uses with LEGO® Digital Designer Software

LEGO® Digital Designer

The freeware LEGO ® Digital Designer offers unique opportunities for computer design. Indeed, it offers an impressive collection of pieces: from bricks to construct buildings to hair's characters you want to integrate...With this software all you have in mind is feasible!

Tools allow you to insert a wall paper, to blow your picture, to make it appear too...

A model library is also available on the website, it allows you to import saved templates.

Educative Aspect

This software has a lot of educative aspects, first, it allows developing the space notion, indeed the construction is done in 3D; the student can see all sides of what is being built.

This software is a real awakening in computer design, indeed you find similar interface for Computer Aided Design software.

It also has an option to review the design of a registered object, which allows each student to learn how to reproduce this item.

Moreover, for younger students, this software is a fun way to learn how to use a computer mouse.

LEGO® Digital Designer & Multimice® New

These two programs together allow the class to develop a common realization. The teacher can give hand in turn to each student so that this latter presents his/her idea to the class.

Students will participate with pleasure in this activity; then they can learn the basics of computer-aided design while having fun.

Teachers can also download a model at home, watch its conception and give instructions for the realization of this model. Then in their classes, they can ask each student to achieve a construction step to ensure their understanding of the instructions.

Many other uses are possible: Imagination is Queen!

The MultiMice® New system allows the deployment of a mobile classroom or media room for a fraction of the cost of conventional equipment:
