

Multimice® *New*

Uses with Educative Freeware

Sweet Home 3D &

Multimice® *New*

Use in tandem with Multimice® *New*, this software allows a class to create 3D plans for a home and develop student thinking about the layout of the space and construction.

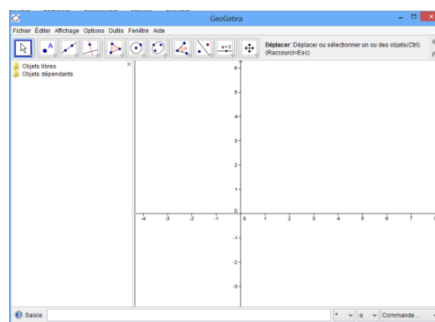

A set of tools is available including a wide range of walls, doors, windows, appliances...

The teacher can give out the hand to students expressing an idea so they can achieve it. Each student brings his/her idea and is thus involved in the course, various suggestions are made, and a discussion is created making the lesson more dynamic. The final plan will be the result of a collective work.

Multimice® *New* will allow each student to express an idea and thus will lead to a collective and interactive work.

GeoGebra &

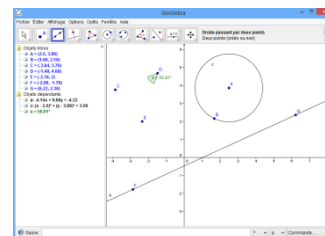

Multimice® *New*

The GeoGebra software can draw mathematical objects such as circles, lines, angles, functions,...

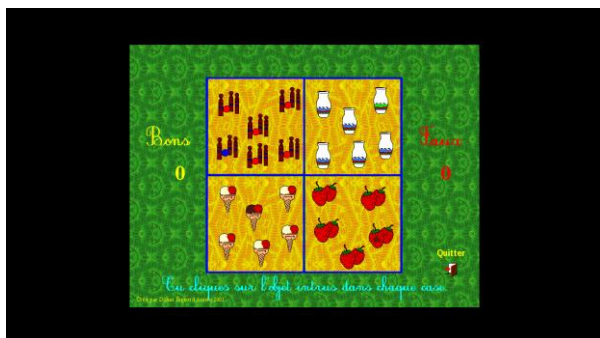

This application, associated with Multimice® *New*, allows the teacher to designate a student so he can trace figures, handing over to another student if he/she needs help...

When you create a circle, the diameter is displayed automatically, when you create an angle measurement of the angle is also shown, this is available for other tools too.

This is a great educational tool for interaction during math lessons.

Intrus & Multimice® *New*

Intrus is an awakening software that offers a fun activity of detecting the intruder in a series of images.

At each level a screen is displayed with four boxes, you need to find an intruder in each box. The difficulty increases gradually.

This software introduces the concept of color, space and orientation; it allows you to develop essential notions of observations for students.

Using with the Multimice®*New* software, the teacher can give a hand to each student one by one so that all participate in the activity.

*The MultiMice®*New* system allows the deployment of a mobile classroom or media room for a fraction of the cost of conventional equipment:*
