

Multimice® *New*

Uses with Educative Freeware

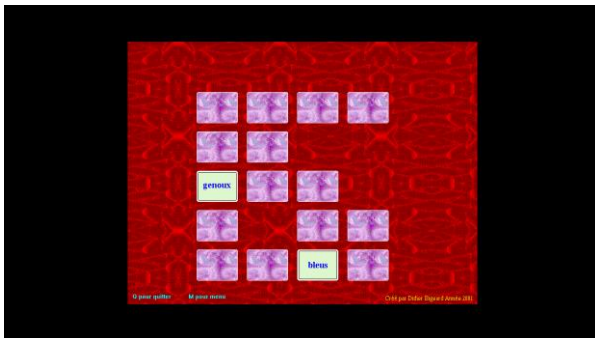

Mariage

Mariage is a freeware for learning how read and write.

Students will combine lower case letters with uppercase letters.

Memoplu

Memoplu is an educational software to learn French grammar.

It works like a memory where you must associate the plural of a word with its singular.

The teacher can choose 20 or 30 cards and can decide to put a timer or not.

Memory

Memory is an educational software for learning how to count.

Students must associate a number with an image including a number of fingers.

The teacher can choose to display 10 or 20 cards.

Mesures

Mesure is a freeware for learning how to measure the perimeter of different objects.

For this, the student can use the rule at her/his disposal.

The MultiMice®New system allows the deployment of a mobile classroom or media room for a fraction of the cost of conventional equipment:

With MultiMice® New :

With this software, MultiMice®New allows the teacher to make more interactive lessons and so develop the student interest for the activity.

By involving the children in these educational games, the teacher keeps them active and retains their attention. This is possible with the function which allows to give the hand alternately, to each student, with MultiMice®New.

The complementarity of educational software and MultiMice®New facilitates understanding and learning.
